                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication

The invention describes an isolated human secreted protein (SECP) polypeptide. Also described are: an isolated polynucleotide encoding the polypeptide; a recombinant polynucleotide; a cell transformed with the recombinant polynucleotide; a transgenic organism comprising the recombinant polynucleotide; a method of producing the polypeptide; an isolated antibody that specifically binds to the polypeptide; a method of detecting a transge polynucleotide; a method of screening a compound for condition associated with decreased expression or disease or condition associated with decreased expression or effectiveness as an agonist or antagonist of the polypeptide or in compound that specifically binds to, or that modulates the activity of, the polypeptide; a method of assessing toxicity of a test compound; a diagnostic test for a condition or disease associated with the expression of SECP in a biological sample; a method of diagnosing a condition or disease associated with the expression of SECP in a subject; a gonist or antagonist compound and an excipient a method of preparing a polypological sample; a method of diagnosing a condition or associated with the expression of SECP in a subject; a gonist or antagonist compound and an excipient a method of preparing a polypological sample; a method of diagnosing the polypeptide, or associated with the expression of secreting the polypeptide, or associated with a method of preparing a polypological sample; a method of diagnosing the polypeptide in a sample; a method of preparing a polypeptide; a method of preparing a polypeptide; a method of preparing a sample; a method of diagnosing the polypeptide of a sample that contains on a solid substrate, where at least one of the nucleotide molecules comprises a first oligonucleotide or polypucleotide sequence specifically hybridizable with at least 30 or polymucleotide sequence specifically hybridizable with at least 30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Baughn MR, Becha SD, I

```
CC contiguous nucleotides of the target polynucleotide. The polypeptide is CC useful for preparing a composition for diagnosing or treating a disease CC or condition associated with decreased expression or overexpression of CC functional SECP e.g. autoimmune disorders, obesity or cancer. This CC sequence encodes a human secreted protein.

The method is useful for obtaining vasodilating substance which increases/decreases expression of vasodilation response genes. The vasodepressor substance obtained by the method of the invention is useful as an antihypertensive drug. The method is also useful for identifying the specific vasodilator response genes. The present sequence represents a human vasodilator-responsive gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ຜ

and preventing encodes human a used in the example is located on a The present invention describes a method for detecting high-grade dysplasia (HGD) in cells of a mammalian tissue sample. Also described: (1) identifying an oesophageal tissue susceptible to oesophageal adenocarcinoma; (2) determining the predisposition of a mammalian tissue to a neo-plastic transformation by detecting HGD in cells of the tissue; and (3) detecting cancer in a patient. The method can be used in detecting HGD and cancer in cells of a mammalian tissue sample. The methods and compositions of the present invention can be used in treating and preventing HGD and cancer, and in gene therapy. The present sequence encodes human alkaline phosphatase intestinal precursor (PPBI), which is used in the exemplification of the present invention. The human PPBI gene chromosome
